

Using Data Feeds From Multiple Sources to Enhance Your OA Agreements Management

Connect your research to the right person and organization

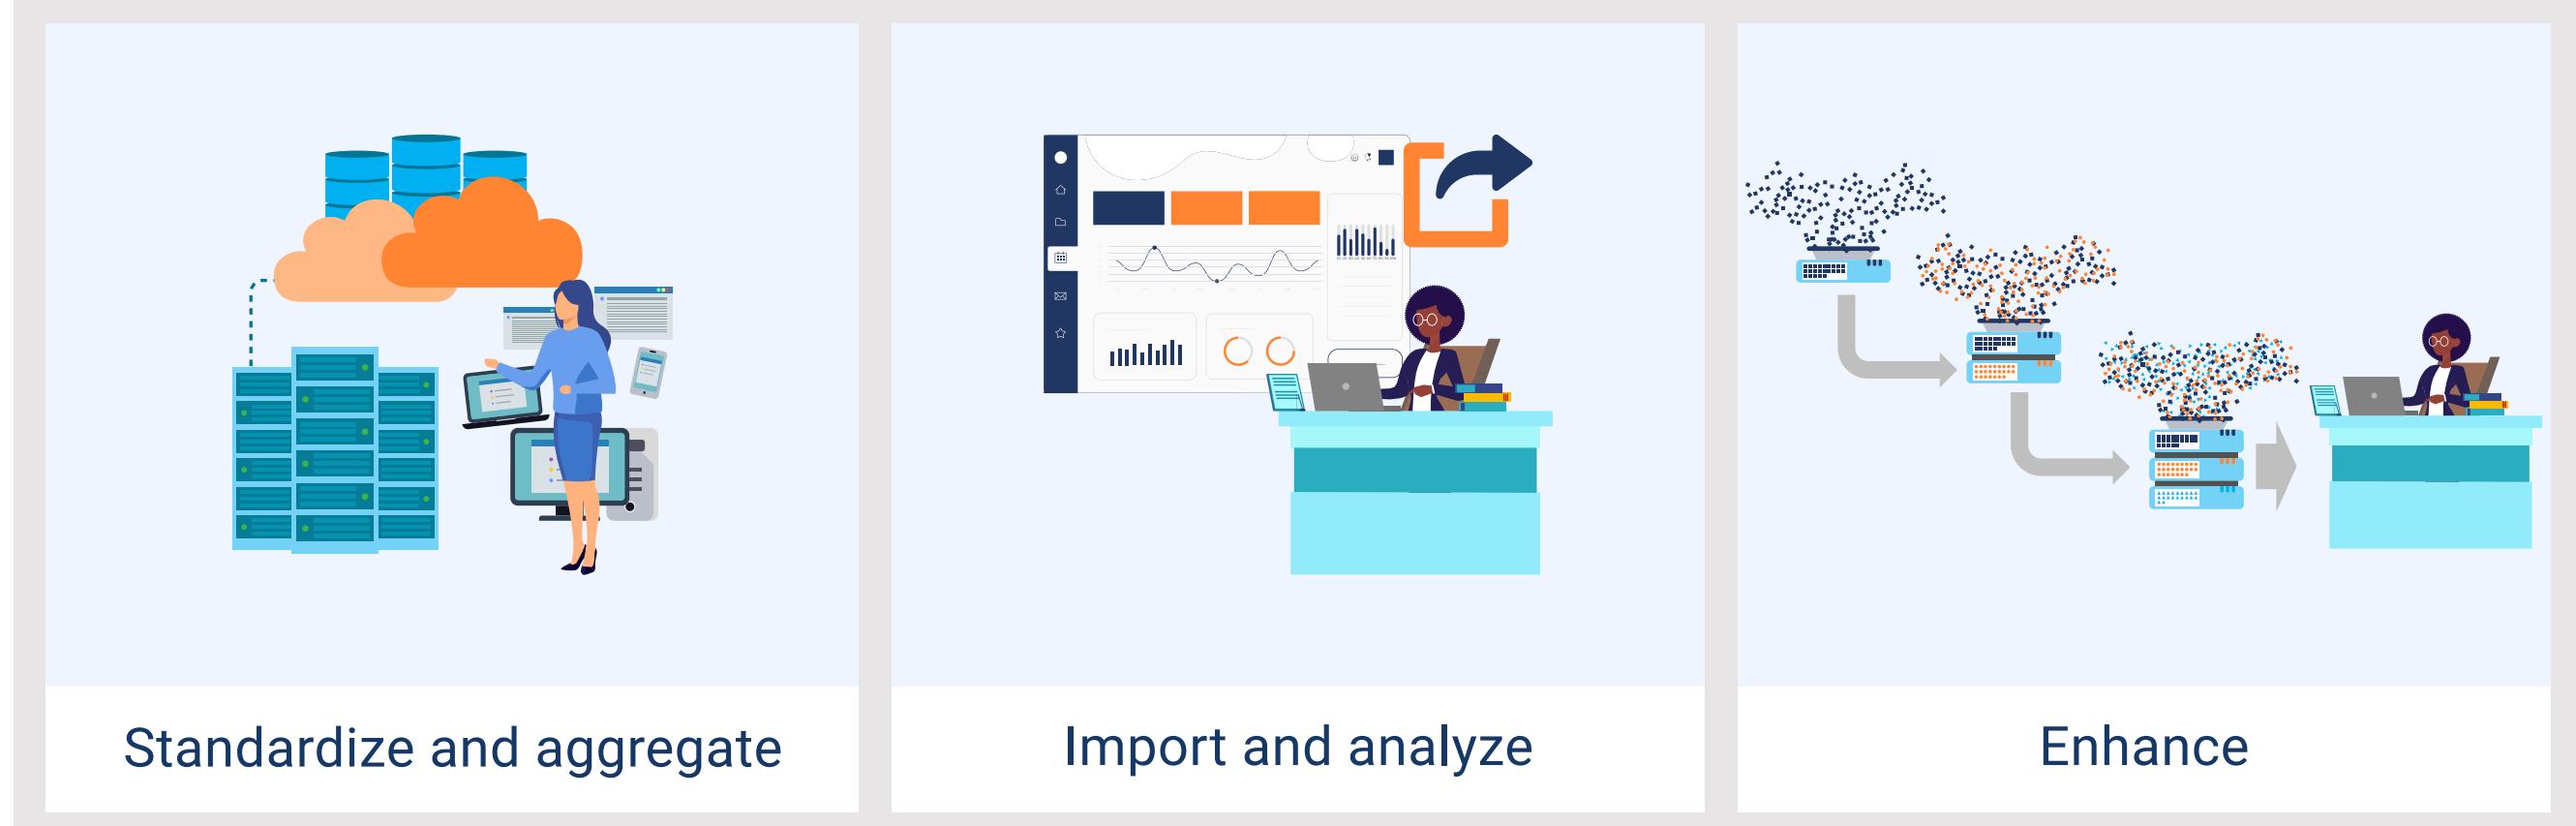

Via OA Switchboard, publishers deliver trusted and standardized data in a consistent format across multiple publishers. Downstream, the OA Switchboard data feed is often complementary to other data feeds. It can also be integrated into commercial and non-commercial solutions (ERM tools, analytics tools, visualization tools, etc.)

Data Quality Challenge

The Data Quality Challenge calls on the community to revolutionize publication metadata management by standardizing information provided by publishers and allowing stakeholders to consolidate and process data efficiently. This initiative is enabled by OA Switchboard and builds upon community-wide lessons learned and best practices, and is based on the core values of the OA Switchboard of Trust, Collaboration, and Efficiency.

Your path to continuous improvement starts here.
